

Pollinator Water Garden

Just like us, our pollinators need water for those very warm days, flying around all day can be very tiring. Recycle a shallow dish to create a pollinator pub.

Recycle a small shallow dish from your kitchen or garden, give it a wee clean first

Add pebbles for pollinator to rest on
(Please DO NOT use glass) as these heat up and can cause injury

Add rainwater (watering cans left out in the garden are a great source for collected rainwater)
Don't cover pebbles completely!

Place among plants and top up every now and then, sit back and see who visits
